Technical Skills
Strong: ReactJS, Redux, Node.js/Express, MongoDB, Javascript, ES6, jQuery, HTML, CSS, Bootstrap, Ubuntu/Linux
Experienced: MySQL, PHP, OOP/MVC, Sass
Dev Tools: PhpStorm, VS Code, Git, GitHub, Postman, Chrome Developer Tools, Github, Robo 3T(Robomongo)

Applications Developed
Travel Starter live | github
- An application created by four developers that allows a user to create their own travel itinerary and also browse other user's travel itineraries.
- Used **React** with **Redux** to create the search and add pages on the front end. Populated the search list using the Triposo **API** via **Axios** calls.
- Created the entire backend with a **Node/Express** server and **Mongo** database.
- As the team's only full-stack developer, resolved all bugs and issues in **React**, **Redux**, **Node**, **Express**, and **Mongo**.

Couch Pugtato live | github
- An application that recommends movies/shows and nearby restaurants that are open for delivery at the time of search based on the user's mood.
- Implemented Youtube, Yelp, and MovieDB **APIs** via **Axios** calls.
- Used **React** with **Redux** to dynamically display the information grabbed from the various **APIs** through onscreen displays created with **React-Bootstrap**.

SGT live | github
- A content management system that dynamically displays data grabbed from an external database.
- Utilized **React** with **Redux** to create the page and dynamically display the information, **Axios** calls for the **CRUD** functionality, and **Node/Express** with **Mongo** to set up the backend database.
- Utilized **HTML5** to create the basic skeleton of the website, **CSS3** to apply styling, **Bootstrap** to make the application responsive, and a combination of **Javascript** and **jQuery** to give the application functionality. Some of said functionality includes DOM interactivity and manipulation, API calls, and data creation/updates/destruction.

OverMatch live | github
- A memory match game with a theme of Blizzard's Overwatch.
- Used a combination of **Javascript** and **jQuery** to dynamically create a game board. Functionality includes DOM interactivity and manipulation.

Professional Experience

Pacific Wine Distributors   **2016-2017**

- In charge of technical issues such as setting up computer towers and troubleshooting IT related problems.
- Processed ~1000 orders per week for delivery to all of Southern California and maintained detailed logs of all orders.

Sushi Asahi   **2013-2016**

- Trained and managed a staff of 5-6 per day. Prepared them for success at the restaurant.
- Shift head-waiter, took over all managerial duties while the manager was absent.

Research Assistant   **2012-2013**

- Assisted the UC Davis psychology department evaluate ~700 surveys to find the correlation between ethnicity and the use of face-saving behaviors.
- Input all the data gathered from the surveys into a centralized database.

Education

Accelerated Web Development from Learning Fuze
BA in Psychology from University of California, Davis

Irvine, CA

Personal

Avid video gamer; always playing a game if not coding. Mainly play multiplayer FPS games like Overwatch and CoD. I also enjoy cycling and reading comics.
